Page 1: Pre-Institute Participant Survey

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

1. Students that lack basic writing skills
 2. Students that lack time management
 3. Ensuring that I do not have pre-conceived notions
-

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

1. Being passionate about what you teach
 2. Using experiences in the lecture setting so that students can understand how the things we teach can be used.
 3. Implementing new technology with traditional delivery.
-

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

In the past, students would not quit something they had started. I am not so sure that it was desire and motivation as it was the mindset, "I am going to do this", I think today's students have lost that mentality. Students will quit over the smallest issues.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Reading and writing levels

Q5 Describe students' greatest learning successes in classes you teach.

That moment that students can actually see how something actually works in the career they are choosing.

Q6 What is one thing about education that you would change if you could?

It would start in secondary school. We are touting the increase in high school graduates; however, the skills that these graduates for success is not present.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

Implementation of more technology in the classroom, creating a passionate learning environment.

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

Respondent skipped this question

Page 1: Pre-Institute Participant Survey

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

Students being unsuccessful online, learning not designed for all learners, course offerings when students aren't able to attend classes.

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

Universal design for learning, using Blackboard collaborate, Skype or Facetime to work with online students, creating more hands on assignments the enhances education/knowledge of the subject for students.

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

Students are not as committed to their work as past students were, wanting instant gratification, students (some) think that instructors are expected to response to them at a moment's notice.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

assessment (institutional), students without access to the internet, students not being equipped to work online.

Q5 Describe students' greatest learning successes in classes you teach.

Students often obtain jobs as a result of their practicum experiences at their sites, complete a degree in a more timely manner, and retain what they learn when applications are used.

Q6 What is one thing about education that you would change if you could?

Meet the needs of all learners in different ways.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

More techniques to use with online courses, more Universal design methods, more on work experience courses.

2018 CTE Institute Teaching & Learning Survey

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

I am excited about coming to the workshops and feel it will enhance what I teach and will gladly share the information with colleagues.

Page 1: Pre-Institute Participant Survey

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

Student initiative, cheating, whether the classroom is preparing the students for the real world

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

Paragraph summaries, homework, projects

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

Writing and math skills have declines. Technology skills have improved. Writing and math-public school curriculum. Technology-culture

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Skills gap. Complex home life.

Q5 Describe students' greatest learning successes in classes you teach.

Payroll project

Q6 What is one thing about education that you would change if you could?

Less emphasis on instructor degrees and more emphasis on real world experience

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

proctored exams

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

Respondent skipped this question

Page 1: Pre-Institute Participant Survey

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

engaging the students, covering all the salient points in the course, are the students retaining the most important objectives

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

One day a week is an activity day, invite guests in to discuss their experiences, involve the class when withing the tests and quizzes

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

I just began teaching college level classes to high school students. Honestly, they are not nearly as mature at 16/17 as they are when they graduate high school. Their study habits have not been developed as well either.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Keeping the attention of immature students

Q5 Describe students' greatest learning successes in classes you teach.

When the students develop proper study skills and the lessons begin to take traction

Q6 What is one thing about education that you would change if you could?

I would offer the first two years of college for free. I feel some students are here for the grant money and many of them are low performers. I feel we can spend the same amount of money and get students that are motivated to be in class - performance will increase

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

I am new to teaching - retired with thirty years of law enforcement. I will take any advice I can get.

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

looking forward to the conference

Page 1: Pre-Institute Participant Survey

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

Being able to connect what the job market needs with what is being taught, classes with too much content, students who want to look up every answer instead of learning the material

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

Using platforms that have scaffolding to support user learning at all levels; teaching students how to use practice tests to learn the material - not look up every answer; encouraging students to stop by my office to talk

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

Students have trouble disconnecting from phones/social media.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Some students work and take classes. Getting those students to make time for studying and to make learning a priority is difficult.

Q5 Describe students' greatest learning successes in classes you teach.

Overcoming the fear of using a platform for assignments.

Q6 What is one thing about education that you would change if you could?

I would like community colleges to realize the value of business/computers/technology for some students. We have too much emphasis on college transfer instead of getting students ready for the workforce. Both areas are needed at a community college.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

I'm not sure.

2018 CTE Institute Teaching & Learning Survey

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

none

Page 1: Pre-Institute Participant Survey

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

colleges ability to keep up with technology, students understanding credit is earned not just given, students poor writing/comprehensive skills

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

Fixed mindset/GRIT, avoiding plagiarism, soft skills

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

Students make a lot of excuses and do not accept responsibility for their academic growth. This is attributed to EOC testing at the high school level. Focus on test took away from students learning how to study, communicate, and write (this is also due to text messaging/social media).

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Inadequate computer technology and timely arrive of textbooks. Students repeatedly come late for class and not prepared.

Q5 Describe students' greatest learning successes in classes you teach.

When they are properly prepared for their dream job interview and they get the job.

Q6 What is one thing about education that you would change if you could?

Student success and annual budget being based upon FTE.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

Fixed mindset/GRIT, better preparation to assist with student engagement in their future.

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

We need a more consistent learning model amongst Faculty. This will ensure students will have similar requirements as they progress through every course. For example: Participation requirements should have established word count requirements and number of required responses per week.

Page 1: Pre-Institute Participant Survey

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

- 1) That the students aren't getting it.
 - 2) that the students don't see a correlation between learning and their success in the future
 - 3) more instructor time is being spent doing administrative tasks than actually developing courses.
-

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

- 1) when students ask questions about the content, it gets the entire class interested.
-

Q3 What (if any) significant differences have you noticed about your current students from students in the past?
To what do you attribute these changes?

Respondent skipped this question

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Time. I don't have the time to develop courses the with as much dedication as I used to because I'm busy with student learning outcome measurements and other administrative tasks.

Q5 Describe students' greatest learning successes in classes you teach.

Respondent skipped this question

Q6 What is one thing about education that you would change if you could?

Funding. Why as a society are we spending more money on prisons than our schools?

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

active learning strategies with small class sizes that actually work and engage students.

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

I think students learn when they are in a classroom where they feel welcomed, are excited about the content, and can see how the course will benefit them in the future.

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

Funding, staffing, salary.

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

hands on labs, visual aids, group work/participation-encourage teamwork.

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

As a technology instructor, it is obvious that students have not been taught any history of how technology has evolved and how we got to where we are today.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Lack of supplies.

Q5 Describe students' greatest learning successes in classes you teach.

Students will learn how to be independent and use the resources around them to problem solve.

Q6 What is one thing about education that you would change if you could?

Students need to begin taking career based classes in High School, not in College.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

Purchasing, funding, outreach.

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

Time Spent: 00:18:25

Page 1: Pre-Institute Participant Survey

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

Pedagogical processes, Creating effective learning outcomes, Classroom management

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

Flipped classroom, Blended (or hybrid) classes, Application exercises

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

Students today often overestimate their knowledge and skills and do not have a lot of patience with the learning process- they want and demand immediate gratification. However, as most of them are digital natives, they tend to be comfortable and accepting of technology. I believe changes in the family unit and changes in technology are the largest contributors to this.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Unmotivated students, students unprepared for the college environment, students lacking basic college success skills (such as being able to take effective notes and read a college text)

Q5 Describe students' greatest learning successes in classes you teach.

That moment with the information that was previously seen as dry and dead becomes applicable and useful to the student. That "light bulb" moment where they "get it" and make that knowledge their own.

Q6 What is one thing about education that you would change if you could?

More focus on student learning and student fit and less on retention and success rates (or whatever is driving the money at that time- previously it was enrollment). I think we get distracted by the money and forget to focus on the student to find the best fit for them- a fit where they will be successful and get a meaningful, quality education. Even if it means taking time off before starting school.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

Any classroom pedagogy, classroom management. Most CIT instructors are experts in their field, yet have limited to no teaching training.

2018 CTE Institute Teaching & Learning Survey

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

I am looking forward to this training. Thank you for allowing me to participate.

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

Presenting information in a way that different learning styles can comprehend, engaging online students, finding innovative ways to present content

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

Having students work in groups, playing games as a study guide, presenting statistics so students understand the 'why' of what we are discussing

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

I've noticed that students seem to be more engaged with technology (social media, texts, etc.) than learning.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Students sometimes want things exactly spelled out for them instead of working through problems/critically thinking.

Q5 Describe students' greatest learning successes in classes you teach.**Respondent skipped this question****Q6** What is one thing about education that you would change if you could?

The expectation some students have that I am here to make them understand everything and they will not have to contribute. I'm willing to help anyone who wants to help him/herself; however, some students aren't willing to even do that.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?**Respondent skipped this question****Q8** Please share any additional ideas/concerns about teaching and learning from your experience.**Respondent skipped this question**

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

students transferability of knowledge, students applying lessons,

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

Quickwrites, Gallery walks, Kahoots for review

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

most can google anything, but they don't know how to critically analyze the information and determine if is reliable. If it is on the internet it must be true. I think this stems from most always having technology at their disposal.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Size of classes; not coming prepared from high school, but meet multiple measures so they are put in 100 level classes.

Q5 Describe students' greatest learning successes in classes you teach.

Moving from not being able to organize thoughts and ideas to creating composed essays by the end of the semester.

Q6 What is one thing about education that you would change if you could?

I would get rid of all of the standardized testing in the k-12 environment. When they get to college, they only want to learn what is on the "test". They are afraid to experiment and discover.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

How to get students to transfer the skills they learned in one unit to the next and how to get them to transfer those same skills to the next class

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.**Respondent skipped this question**

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

proliferation of online courses as a panacea to compete with online schools, the lack of preparation for college level courses in the non four year university high school track, difficulty in reaching millennials in the classroom.

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

the use of current events as examples of curriculum topics, work based learning opportunities, peer to peer review and assessment

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

students are easily distracted in class and in their educational journey, wedded to technology- I think both are attributed to the ubiquitous nature of technology in our society.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Competing with technology

Q5 Describe students' greatest learning successes in classes you teach.

successfully applying a difficult concept in a practical application

Q6 What is one thing about education that you would change if you could?

increase real life, practical application within the classroom.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

ideas for incorporating work based learning within curriculums

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

Respondent skipped this question

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

Students not getting the proper training in the classroom, instructors not able to learn about new technology, and student retention.

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

Discussion during the lecture, hands-on teaching, and showing examples of what is being discussed.

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

There is a lot of difference. It seems that the older students are more grounded, while the younger students have not matured.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Not having the proper equipment, not having enough students in the programs, and getting students to be certified.

Q5 Describe students' greatest learning successes in classes you teach.

When they are able to do hands-on without my help.

Q6 What is one thing about education that you would change if you could?

Equipment and software are always up-do-date.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

How to keep students engaged, how to recruit students in your program, how to get students to talk to you when they don't understand what they are doing, and how to help students to understand the importance of doing all of their assignments, labs, and test.

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

Keeping students engaged,
keeping my material valid,
Student success rates

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

Hands on instruction,
Teaching by example,
Group engagement

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

Currently, students seem to be lazy and have no drive to explore.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Our program has an open-door policy.

Q5 Describe students' greatest learning successes in classes you teach.

I believe for my students, employment is their greatest learning success.

Q6 What is one thing about education that you would change if you could?

I believe better advising would be a start. I would also like to see more limited enrollment for technical programs.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

I would like to explore more ideas and methods of online and virtual learning environments. Also, I would like to explore methods of rubrics and practical examinations.

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

Students' motivation to learn, cheating/plagiarism, students' lower expectations

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

hands-on experience and practice, less lecture and more open discussions, use protocols to guide lecture and discussion times
(National School Reform Faculty)

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

Students are not using technology to learn and are not literate in the use of technology. They know how to use a smart phone, but do not know how to use a word processing correctly or to create effective presentations.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Technology at hand is a huge distraction. Students are paying more attention to their phones than to the class. Students wants an easy way and attempt cheating at every possible opportunity.

Q5 Describe students' greatest learning successes in classes you teach.

Completing an Intro to Computers course and students are able to write papers using MLA format with the word function, are able to use basic spreadsheets, and are able to use email and PowerPoint correctly.

Q6 What is one thing about education that you would change if you could?

The classroom traditional set up of tables and chairs aligned to a projection screen to a multipurpose classroom open to different set ups as needed. I will reduce K-12 education to K-8 + college courses.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

More information on adopting rubrics for every CTE course.

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

Faculty burnout after a few years teaching the same courses.

Page 1: Pre-Institute Participant Survey

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

cultural/ethnic differences in learning, students unwilling to challenge preconceived notions about how the physical world works, fostering a growth mindset

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

case studies, flipped classroom, chemistry demonstrations

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

Students lack the ability to communicate outside of electronic sources. They avoid face to face conversations because they have become dependent on technology to communicate for them.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Math readiness, study skills, time management

Q5 Describe students' greatest learning successes in classes you teach.

I love doing case studies. It encourages a higher level of analysis, and many students have the elusive "light bulb" moment when they can connect a concept with a real world scenario.

Q6 What is one thing about education that you would change if you could?

Implement more guided pathways for higher education degrees

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

Teaching strategies for online science courses

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

N/A

Page 1: Pre-Institute Participant Survey

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

Cheating, Professionalism, getting students to retain the material

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

Make the work relevant to everyday situations, letting students participate in classroom discussion, flip classroom

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

They are not as dedicated. They want the easy route. Not sure as to the reason for the change.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Diverse groups of students

Q5 Describe students' greatest learning successes in classes you teach.

Students passing the certification exams which let you know that the students attained the material.

Q6 What is one thing about education that you would change if you could?

Adding additional programs to adhere to the path students take to achieve their desired degree.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

Other programs to offer based on students' demand.

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

Page 1: Pre-Institute Participant Survey

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

- 1 - Actively engaging the diverse students in my traditional and online courses.
 - 2 - Graduating globally competitive students
 - 3 - Helping students understand the importance of collaborative work
-

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

- 1 - Use of technology in a traditional and online class
 - 2 - Role-play and activities to implement what they've learned.
 - 3 - Real scenarios
-

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

Current students don't want to be lectured to as much as the older or former students. They learn more by practice and activities or cases.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Not sure what you are asking for but some of my major challenges are the outside influences students encounter. And sometimes their lack of motivation.

Q5 Describe students' greatest learning successes in classes you teach.

For my particular program, I see student successes when they take what they have learned and utilize it in their clinical experience class. And at the end of their final clinical semester, they are offered a job by that agency. That to me equals success.

Q6 What is one thing about education that you would change if you could?

I would like to see a better Placement Test to determine if first year students are ready for their English and Math classes.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

Innovative and Creative techniques and strategies they have tried that they found successful.

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

They are the same.

Retention of concepts from material, Application of the knowledge in real life situations, Striving to learn and grow your knowledge continuously.

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

Repetition repeating the task or procedure to perfect skill and gain the ability to perform well in a timely manner, hands on demonstration from instructor to student and then reflective learning where the student demonstrates to the instructor.

The endless possibilities of online education.

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

Attitude has become a major concern, self motivation is not common in our current students, technology can be an asset but is most often an enemy to the educational process. Cell phones are something that can no longer be ignored but most students.

Technology advances have certainly made an impact on all of us. Children are growing up with more time on their own and spend greater amounts of times using social media rather than one on one interaction.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Gaining the students attention for longer periods of time, keeping the focused. Dedication and persistence is just not there . Students want instant gratification and will not spend the necessary time to perfect any given skill.

Q5 Describe students' greatest learning successes in classes you teach.

The greatest success is the success of my students, their completion of the program , passing board exams and becoming self supportive.

Q6 What is one thing about education that you would change if you could?

The workload on the teacher. Allow them to teach without being overwhelmed with paperwork and other demands on their time.

2018 CTE Institute Teaching & Learning Survey

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

How to free our minds during the actual instructional time and actually focus on the needs of our students.

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

Attitude,
Potential of Violence,
Misconduct,
Students lack of responsibility for their actions

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

Having enough time for interaction and engagement in online courses and keeping up with the grading/assessment with meaningful feedback, being able to express my passion for this career path adequately to online students and making the online courses exciting/fun/challenging all at the same time, students not motivated to be successful and settling for mediocre.

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

Using object lessons and interactive games to illustrate a lesson or important information of course material/subject, having students engaged in hands-on activities or observations (practicing what they are learning), role-playing situations they may encounter in the work environment and then discussing as a class afterwards.

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

In general, they don't want to put forth the effort needed to be successful or exceptional - they are apathetic.

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Most of the courses I teach are online courses so the greatest challenge is having enough time to adequately motivate, encourage, and engage each student in the course. For many of our students, life's challenges seem to interfere with their academics which is understandable. They seem to have quite a lot of drama and students are not prepared and/or have a lack of motivation These challenges will present issues as they enter the workplace as well.

Q5 Describe students' greatest learning successes in classes you teach.

Students having hands-on experiences in and outside of the classroom help them most in being successful in classes - When students connect the concepts to how it applies in the real word. I also think for our older students, the ability to learn the newer technologies gives them a great sense of pride.

Q6 What is one thing about education that you would change if you could?

Constantly changing - and swinging from one extreme to the other. We don't seem to find a balance on things. (Also, the cost of textbooks).

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

Educational resources that reduce cost for students (open source, e-texts and other media and resources) as well as ideas to make online learning exciting and engaging.

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.

I have concerns about the preparation we have for educators in the Community College system. We have a tendency to assume that someone who is a subject matter expert in their field is capable of teaching that subject to others. We need a teacher training program for new hires that covers some of the basic teaching concepts they may be unfamiliar with, ie: best teaching practices, teaching strategies, student learning outcomes, curriculum mapping, program planning and program outcomes, assessment and data collection, analyzing data and closing the loop.

Q1 What are your 3 greatest concerns about teaching and learning? (Please separate items with commas.)

Keeping up with technology, trying to get students to understand that you can learn through your mistakes, staying current in modern techniques

Q2 What are your 3 favorite (or most successful) teaching techniques or strategies? (Please separate items with commas.)

Cooperative Learning, use of real-world scenarios, Facilitator

Q3 What (if any) significant differences have you noticed about your current students from students in the past? To what do you attribute these changes?

attention spans, problem solving skills

Q4 Describe the greatest challenges or impediments to teaching and/or learning in classes you teach.

Outside distractions not related to education.

Q5 Describe students' greatest learning successes in classes you teach.

The Epiphanous moments when everything just clicks

Q6 What is one thing about education that you would change if you could?

The support system, educators are required more and more outside the classroom responsibilities.

Q7 What ideas about teaching and learning would you like to explore further with your colleagues?

Ideas about projects and grading challenges for large group projects

Q8 Please share any additional ideas/concerns about teaching and learning from your experience.
